
REFRIGERATED PREP TABLES

Installation, Operation and Maintenance Instructions

Please read this manual completely prior to installing and operating this equipment. This manual describes how to install, operate and maintain the product in order to obtain the optimum in performance, efficiency and reliability.

RECEIVING INSPECTION

Congratulations on your purchase of a quality built appliance. When properly installed and maintained this product will give many years of trouble free service. It was shipped using trusted carriers with a history of careful handling, good customer service and prompt delivery.

Even with all of these precautions taken occasionally accidents may happen which result in shipping damage. When the product was picked up by the carrier they assume responsibility for the product until they deliver it to you. Thus any claims for shipping damages must be filed with the delivering carrier.

Always thoroughly inspect the delivery for visible damages and shortages. Should any damages or shortages be found be sure to note them in detail on the delivery receipt before you sign off on it. Make sure the driver signs and dates the delivery receipt acknowledging the damages. This is critical in protecting yourself should a claim need to be filed. You can consult the carrier's website for their specific claim procedures. Remember it is your responsibility to file a claim with the carrier.

In the case of concealed damages that are not discovered in the initial inspection but are found upon removing packaging, time is critical. You should unpack and inspect the unit as soon as possible. If concealed damage is found, stop unpacking and contact the delivering carrier immediately to alert them of the damages and get a claim number. Save all packaging for inspection by the carrier. Consult the carrier website for details in filing a concealed damage claim.

Please remember, the carrier is your only source for reclaiming freight damages. The manufacturer should not be contacted to attempt a return of the product. No returns are accepted without a prior authorization.

SAFETY INFORMATION

This manual may contain notices that identify situations that could cause death, serious injury and /or damage to the appliance or property.

Please make note of the following definitions;

! WARNING Indicates a hazardous situation which could result in death or serious injury.

NOTICE Indicates a situation which could result in damage to the appliance or property.

IMPORTANT Indicates important information about the use and care of the appliance.

! WARNING

This appliance should be applied only for the use for which it has been expressly intended. Any other use would be considered improper and therefore dangerous. The manufacturer cannot be held responsible for injury or damage resulting from improper, incorrect and unreasonable use. Failures to install, operate, or maintain the appliance in accordance with this manual will adversely affect safety, performance, component life and warranty coverage.

To reduce the risk of death, electric shock, serious injury or fire, follow basic precautions including but not limited to the following;

- Only qualified service technicians should install and service this appliance.
- This appliance must be installed in accordance with applicable national, state and local codes and regulations.
- To reduce the risk of electrical shock, do not touch the appliance or plug with wet hands.
- Disconnect the appliance from power before servicing.
- The appliance requires an independent power supply of proper capacity. See the appliance nameplate for electrical specifications. Failure to use an independent power supply of proper capacity can result in a tripped breaker, blown fuse, damage to existing wiring or component failure. This could lead to heat generation or fire.
- The appliance must be properly grounded. This appliance is equipped with a NEMA 5-15P three prong grounded plug to reduce the risk of potential electrical shock hazards. It must be connected to a properly grounded, independent 3 prong wall outlet. Do not remove the ground prong from the appliance plug and do not use an adapter plug. Failure to follow these instructions may result in death, electrical shock or fire.
- Do not use an extension cord to supply power to the appliance.

- Do not use the appliance should the power cord become damaged. The power cord should not be altered, jerked, pinched, bundled and/or used to hang objects from. Such actions could result in electrical shock or fire. To disconnect the unit from power, be sure to grasp and pull on the plug, not the cord.
- Should the power cord require replacement or service, use only the manufactures replacement parts and be sure to connect the green ground wire to the appliance in the same manner the original wire was connected.
- Do not spray or splash water on the appliance as this may cause short circuits, electrical shock, corrosion or failure.
- Do not make alterations or modifications to the appliance as these could result in electric shock, injury, fire or damage to the appliance.
- Children must be properly supervised around this appliance.
- This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities or lack of experience and knowledge unless they have been given supervision or instruction concerning its use by a person responsible for their safety.
- Do not climb, stand, or hang on or into the appliance or its components. Death or serious injury could occur or the appliance could be damaged.
- Use caution when opening doors or lids and keep fingers out of pinch points areas.
- Do not use combustible sprays or aerosols around the appliance as they may catch fire.
- Do not store gasoline or other flammable substances in or near the appliance as they may catch fire.
- Keep the area around the appliance clean. Dirt, dust or insects around the appliance could cause harm to individuals or damage to the equipment.
- Do not load the shelves with more than 100 pounds of load as they could fall and cause injury.
- Do not block air inlets or outlets as this would cause cooling performance to be reduced.
- Do not overload the storage capacity of the appliance. Allow space between stored items for air flow.
- Do not load warm or hot items into the appliance. Allow them to cool first or they will raise the cabinet temperature and could hasten the deterioration of other foods stored in the cabinet.
- This appliance is designed for the temporary storage to food products. Use proper sanitation practices.
- All food products should be covered or stored in sealed containers. Open foods may dry up, pass their smell to other foods and increase cross contamination. Some food products may accelerate corrosion of the evaporator resulting in failure of the appliance to cool.
- Component parts must be replaced with manufacturer original equipment parts.

SET-UP AND INSTALLATION

CAUTION

This unit uses a flammable refrigerant. Use care when handling and operating to avoid damaging the refrigerant tubing or increasing the risk of a leak.

! WARNING

This appliance must be installed in accordance with all applicable national, state and local regulations. This appliance is heavy. Use care when lifting and positioning. Work in pairs when needed to prevent injury or damage. This appliance is not intended for outdoor use. The store temperature should be at or below 75 F and a relative humidity of 55% or less. At higher temperature or humidity conditions, the performance of these cases may be affected and the capacity diminished. These cases should not be positioned where it is directly exposed to rays of sun or near a direct source of radiant heat or airflow. This will adversely affect the case and will result in poor performance. Operating conditions range from 45°F to 86°F (7°C to 30°C). Operating this appliance outside its range and installation requirements may affect performance and warranty coverage.

Caster/Leg Installation

NOTICE

The Casters or Legs supplied with the unit must be installed for the unit to operate properly. If they are not installed the unit will not perform properly and the warranty will be void.

Once the appliance has been removed from its shipping container the Casters or Legs will need to be installed when applicable. The Casters or Legs can be found packaged inside the unit. Lay the unit on its back (protect the back surface to placing cardboard down first). Protect the power cord so that it does not get pinched or damaged. The plate style Casters attach to the bottom of the cabinet with 4 screws. The screws are packaged with the Casters. The Casters with the locks should be installed on the front of the unit. Be sure to tighten the screws snug to prevent them from coming loose. Optional Legs attach similarly.

Once the Casters or Legs installed the unit can be returned to its upright position. Be sure to work in pairs when returning the unit to the upright position.

NOTICE

Do not operate the unit for 1 hour after returning the unit to its upright position to allow the oil to settle in the Compressor.

Shelf Installation

The appliance is supplied with one Shelf per door and four Shelf Supports per Shelf. Install the Shelf Supports on the Shelf Pilasters (factory installed on inside walls) at the height desired. All Shelf Supports must be at the same height for each Shelf. Install the Shelf on the Shelf Supports.

Pans/Pan Adapter Bars/Cutting Board

Food Pans

The unit comes with a number of 4" deep 1/6th size pans installed to fit the pan opening. All pans should be cleaned prior to use. The unit will accept up to 6" deep pans of various sizes to accommodate your needs.

Pan Adapter Bars

The unit comes with an array of locking-in-place Pan Adapter Bars installed to secure the pans in place. Pan Adapter Bars can be added or removed to fit your pan size requirements.

Cutting Board

The unit comes with a 9.5" deep reversible Cutting Board. Clean the Cutting Board prior to use. The Cutting Board is secured in place by Cutting Board Brackets mounted on each end of the unit.

Locating the Appliance

The unit needs to have Casters or Legs installed to operate properly.

IMPORTANT

- Confirm that the floor in the installation location is strong enough to support the unit.
- Confirm that the ambient temperatures are within the tolerances allowed.
- Do not locate next to heat generating appliances.
- The unit is intended for indoor installation.
- Confirm the unit is installed level.
- Do not use an extension cord to connect the unit to power. Use of a extension cord will void all warranties.
- Do not tamper with the ground pin on the power cord and confirm that the power receptacle has a properly wired ground connection.
- The appliance must be isolated on a power circuit.
- Confirm that the power supply matches the required power supply noted on the cabinet serial plate.
- Allow a minimum of 3 inches between the back of the cabinet and the wall for proper operation

Reversing the Door Swing (27" solid door models)

The 27" solid door models come standard with a right hand hinged door. To reverse the door to left hand hinging follow the steps below. You will need a Bottom (145683) Left Hand Hinge to reverse the door swing.

1. Disconnect the cabinet from power.
2. Lay the cabinet on its back.
3. Open the door more than 90° and remove and save the 4 hexagonal bolts that secure the Top Hinge Plate to the cabinet.
When removing the bolts, be careful as the Top Hinge Plate is under spring tension and will rotate once the bolts are removed.
Lift the door slightly forward to remove it from the cabinet. Remove the Top Hinge Assembly (hinge plate, shaft only) from the top right of the door and push the spring into the hole on the right side of the door and cover with the grey silicone cap that is from the left side of the door. Please keep the Top Hinge Assembly (hinge plate, shaft only) for use to the left side in step 9.
4. Remove the bottom right hinge attached to the cabinet by removing the 4 bolts. Save the 4 bolts and discard the Bottom Right Hinge.
5. Attach the supplied Bottom Left Hinge (145683) with 4 bolts removed in step 4 on the left side of the bottom of the cabinet.
6. Return the cabinet to its upright position.
7. Remove the grey silicone cap from the top left corner of the door and re-insert it in the hole in the top right of the door. Remove the Bushing from the bottom right of the door and insert it into the hole in the bottom left of the door.

8. The spring (left) is already in the pocket on the top left corner of the door. Important - The straight end of the spring will need to be inserted into a small hole in the bottom of the pocket so when it is rotated it has tension.
9. Install the Top shaft taken out from the right side to the top left pocket/spring and insert the straight end of the spring into the small hole at the bottom of the hinge shaft collar. Insert the Top Hinge Plate onto the Hinge Shaft. The Top Hinge Plate should be at a 90 degree angle to the door and sticking out to the front of the door when the spring is relaxed.
10. Place the Door on the cabinet by inserting the pin on the Bottom Hinge into the Bushing placed into the bottom of the Door in step 7.
11. To apply tension to the spring, wind the Top Hinge clockwise 180 degrees and use the screws removed in step 3 to attach the Top Hinge Plate to the cabinet. Note that the Top Hinge Plate can rotate due to the tension of the spring. Work carefully.
12. Check the Door to confirm the self-closing feature is operating properly. Adjust spring tension as required.
13. Wait one hour before re-connecting the unit to power.

START-UP AND OPERATION

After meeting the set-up and installation requirements the unit is ready to start-up. Once the power cord is connected to a live outlet the unit will start running. Allow the unit to run for two (2) hours prior to loading it with product.

Temperature Adjustment

The Temperature Control is located on the inside back wall of the unit and comes pre-set to the mid-point position which will give internal temperatures of approximately +38°F. Should you require a warmer cabinet temperature turn the temperature control counter-clockwise or if you require cooler temperatures turn the control clockwise. Adjust the control in small increments and allow the unit sufficient time to respond fully to temperature adjustments.

Loading Product

Once that cabinet has been operating at the desired temperature for a sufficient period of time, product can be loaded into the cabinet. Prior to loading product adjust the shelving to the desired position.

IMPORTANT

When loading product use caution not to block airflow to achieve maximum cooling performance.

Do not load product where it would block the air intake or discharge at the back inside wall of the cabinet.

Do not load warm product into the cabinet as it will affect the cabinet temperature and products previously stored in the cabinet.

Products should be in covered containers or wrapped to prevent cross contamination. Product in the pan area should be removed and stored in containers overnight. Do not run the unit without the pans in place for any extended length of time.

Defrost

These units have "Off Cycle" defrost. The unit will defrost automatically during each off cycle of the Compressor.

CLEANING AND MAINTENANCE

All service should be performed by factory authorized personnel. All component parts shall be replaced with like components to minimize the risk of possible ignition due to incorrect parts or improper service.

! Warning

Disconnect the unit from the power supply prior to conducting any maintenance, cleaning or servicing the appliance. Only re-connect the power when finished with the job.

Do not spray or splash any water directly onto the appliance.

Important

Do not use caustic chemicals when cleaning the appliance.

Do not use acidic cleaners when cleaning the appliance.

Do not use chlorinated cleaners on the stainless steel as this can lead to corrosion.

Do not use scouring or abrasive pads on the stainless steel.

Use only mild soap or stainless steel cleaners and soft cloth when cleaning.

Cleaning

Exterior and Interior Surfaces

Use mild soap/warm water solution and a soft cloth to clean the cabinet exterior. Wipe with the grain of the metal to avoid scratches. Do not use abrasive cleaning pads. A Baking Soda solution can be used to help remove odors on the interior.

Note - Do not use stainless steel cleaners or other solvent based chemicals on the plastic door handle as they can cause failure. Use a mild soap and warm water solution to clean the handle.

Shelves

Remove the shelves from the cabinet and clean with a soft cloth or brush and mild soap/warm water in a sink.

Door Gasket

Door Gaskets should be cleaned periodically with the mild soap/warm water solution to remove any debris collected in the bellows. The gasket can be easily removed if necessary by pulling it out of the groove starting at the corners. Replace by pushing the gasket back into the groove starting at the corners.

Maintenance

Condenser Coil Cleaning

Disconnect the power to the unit prior to cleaning the Condenser Coil. Periodic cleaning is necessary to help the refrigeration system operate at peak efficiency and to maintain warranty.

Steps.

1. Disconnect the unit from power
2. Remove the rear grill
3. Use a soft bristled brush to remove any dirt particles that are on the fins of the Condenser Coil. A vacuum cleaner may be used along with compressed air to loosen and remove particles.
4. Replace the grill and re-connect to power.

It is recommended to check and/or clean the coil 4 times a year depending on the installation.

TROUBLE SHOOTING GUIDE

Problem	Remedy
Compressor will not start	<ul style="list-style-type: none"> · Check the power cord and make sure it is plugged in. · Check the power supply to confirm power to outlet.. · Check the temperature controller. If it is in the "OFF" position, turn it clockwise to set a desired temperature. · Confirm unit is isolated on a power circuit.
Poor performance	<ul style="list-style-type: none"> · Move the unit from direct sunlight. · Move the unit away from heating devices. · Install the unit in a well ventilated place, with at least 3 Inches of clearance on all sides. · Clear contents from blocking the Drain Pan/Air Duct. · Check the Temperature Control for incorrect setting. · Check the refrigerant level, it may need to be charged. · Check the door and be sure it is completely closed. · Check the Door Gasket condition. · Check product load to confirm good airflow in cabinet. · Check fans to confirm all are working and not missing blades.
Unit noisy	<ul style="list-style-type: none"> · Install the unit on a level surface. · Check for loose part or mounting. · Keep the tubing free from any contact to avoid rattle. · Check fans to confirm all are working and not missing blades. · Check fan blades to see if they are contacting anything.
Condensation on cabinet exterior	<ul style="list-style-type: none"> · Reduce humidity where the unit is installed. · Repair or replace the gasket on the door.
