

LEADING THE WAY IN **INDOOR A2L TECHNOLOGY**

SPLIT-PAK A2L[™] REMOTE REFRIGERATION SYSTEMS

OUTDOOR UNITS CAN'T BE USED INDOORS

- ✔ While A2L refrigerants are classified as low toxicity/low flammability, you must only use A2L refrigeration systems indoors that are fitted with the appropriate components to maximize safety.
- ✔ Using outdoor condensing units for indoor applications puts you at risk of agency violations and fines.

RSG HAS THE SOLUTION

- ✔ **Not all manufacturers offer indoor A2L systems – RSG does.**
- ✔ Split-Pak A2L[™] remote condensing units are **UL certified for indoor applications**, making RSG **one of the first manufacturers in the industry** to offer this capability.
- ✔ Indoor systems include integrated refrigerant-leak mitigation devices **on evaporator coils and condensing units** for maximum safety.
